

CSE360- Computer Interfacing
Quiz 04; Spring'26
Set B

Name: _____ ID: _____ Section: _____

Marks: 15 points

Time: 20 minutes

Instructions: Answer all questions on the space provided below for each.

Question 1 (CO2 - 15 points): Suppose you are in a hospital at night and you need to check your oxygen level in your blood with a device that has been locked inside a box that can only be opened with your fingerprint. The sensor used doesn't require any light to operate. While you are trying to find out your oxygen level, the gas sensor of the hospital goes off.

- a. Identify** the sensor used in the box and explain its **working mechanism**.
- b. Name** the type of sensor that the device uses to find out your oxygen level in blood. Briefly explain how it can **detect the oxygen level**.
- c. Discuss** the working principle of a Gas Sensor.
- d.** Name a sensor that uses microwave to sense environmental data.
- e.** Classify all the sensors above a passive or active.
